

Installation Instructions

**Step1:**

Control: Installer (setupUSBLockRP.exe)

Install with administrative privileges on the PC or server from where you will control, and monitor security (or any PC for testing).

Start from start menu or quicklaunch icon.

Note the Machine IP at bottom left corner (write down this number. you will need this IP number to install the clients).

Control

**Step2:**

RP Clients: Installer (setupklpsrvcr.exe)

Install in up to 5 PCs that you wish to control and monitor during your test.

Require to install with administrative privileges.(runs automatically / no privileges or interaction required to run)

At installer prompt enter the IP address of the computer were you installed the "Control" (Required) (Control "Computer name" can also be used instead of IP -recommended for variable IP network configurations)

Restart the PC and log as the regular user. (Not required)

Repeat the process for other 4 PCs or less (Demo limitation).

Clients

**Note: You will also be able to try USB aware (add-on)  
Sold separately**

USB Aware (Add-on) will report USB extracted file names while USB is not protected during your test.

---

**To Use:** Start the Control

You will see the client PCs automatically log-in and report their actual security.

"U" denotes "UNPROTECTED"

"P" denotes "PROTECTED"
