

USB Lock Standard (ST)

By Advanced Systems International SAC

Protection Scope:

USB Lock Standard works at machine level.

That means protection is applied to all existing users accounts, or future user accounts of the Operating System. Regardless of their account privilege status. Therefore the password is global, and the programs control panel can be accessed by the password holder user. by clicking on the system tray USB Lock ST Icon.(from any account in the PC)

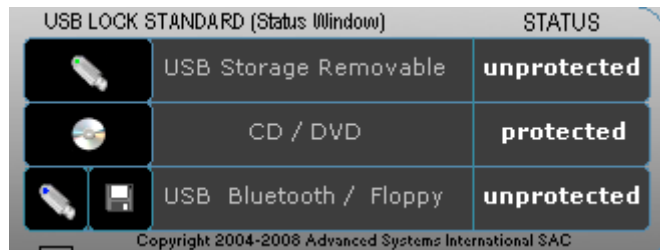

The installation of the software requires you to have a administrator account. The initial password setup will be made from the account installing the program

Reach

The program is designed to provide, an effective, easy to implement, and manage protection method for computers running Microsoft Windows 2000, XP, and Server 2003 or, Vista operating systems.

Its purpose is to protect yours and/or company's systems from the risks generated by the unauthorized use of USB removable drives including USB3 technology smart drives, pen drives, I-pods, mp3s, storage capable printers. CD, DVD, USB Bluetooth transceivers, and floppy

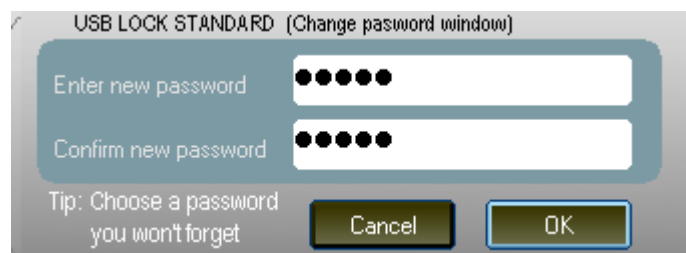

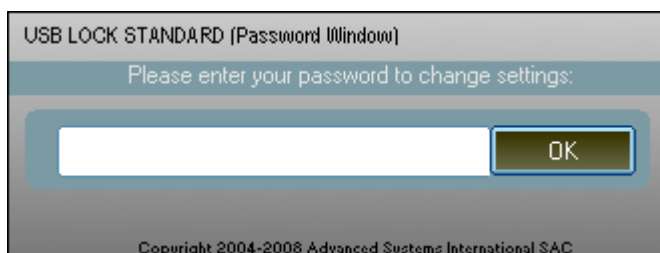

(it will not restrict the normal use of USB non storage peripherals like mouse, scanner, printers, and v-cams.)

Auto-hiding status window inform you of protection when Computer starts or if you right click on the tray icon.

Access:

To access the control panel, and be able to apply or change security measures You are required to enter your password.(You can then change your password from the control panel at anytime

Usage:

When you are done using your device, and want to protect, or if the machine is protected, and you need to use a device you will just: Left click on the tray icon

- 1) Enter your password
- 2) Click enter, or press OK.

- 3) Press on the corresponding lock.

Note: Actual protection status is accessible by right click on the tray icon (no need to enter password)

Trial testing:

You will be able to test this fully functional 10 day trial before you license the product permanent usage (the activation code is sent to the email provided during order within 6 hours (normally right away). You can order or activate at anytime by clicking on the assistance button.

We recommend you test the following to see protection in action;

-
- 1)
 - Remove USB Removable drive if inserted (if you don't remember to do that the program will let you know.
 - Protect USB.
 - Insert a USB storage removable drives.

Program visible behaviour:

A security screen will prevent access until the device is removed.
The device won't be accessible.

-
- 2)
 - Protect CD DVD,
 - Insert a CD or DVD
 - Program behaviour:

The CD will be ejected, and a security screen will prevent access for a few seconds after ejection. (The ejection might take a bit longer the first time it's activated.)
The CD won't be able to be used.

Note: supports multiple CD DVD ROM's.

-
- 3) If you have a USB Bluetooth transceiver or floppy you can also test the behaviour.
 - Protect Bluetooth/Floppy
 - Insert a USB Bluetooth transceiver
 - The behaviour will be same as USB storage.
 - Note: floppy changes in protection are effective the next time the PC boots.

You can also try to insert different combinations of the device.

Password

It is recommended that you choose a password you won't forget or that you write it down.

You can change the password from the control panel once initially setup. You will be guided to set your password a few seconds after installation.

Uninstall:

The program will allow you to uninstall from the password protected USB Lock Standard control panel. (You can test this, and reinstall if desired.)
